**Striving for Sustainable Development**

Our industry is committed to sourcing 100% of our palm oil and soy oil from certified, sustainable sources by 2015.

In 2013, 61% of the palm oil and 52% of the soybean oil processed by the Dutch food industry was sustainable.

Our industry uses 40% less energy per quantity processed oil or fat compared to 1993.

Over a period of 10 years, we achieved a significant rise in the use of liquid frying oils: from 51% in 2003 to 85% in 2013.

Today, 40% of the frying oils and fats used in Dutch households is collected for recycling.
